Repare Que:
$$\frac{2}{x+3} + \frac{2}{x}$$

$$\frac{2}{x+3} + \frac{4}{x+5} = \frac{2(x+5) + 4(x+3)}{(x+3)(x+5)}$$
$$= \frac{2(x+5) + 4(x+3)}{(x+3)(x+5)}$$

(x+3)(x+5)

$$= \frac{2x + 10 + 4x + 12}{x^2 + 8x + 15}$$
$$= \frac{6x + 22}{x^2 + 8x + 15}$$

 $x^{2} + 8x + 15$

 $\left(\frac{2}{x+3} + \frac{4}{x+5}\right) \xrightarrow{\text{"iapart"}} \left(\frac{6x+22}{x^2+8x+15}\right)$
